

A Preliminary Design for a Small Permanent Magnet Cyclotron

Barry King

Department of Physics

Houghton College

- What is a Cyclotron?
- Why build one?
- What have we done?

What is a Cyclotron?

- Ionized gas
- Vacuum
- Oscillating Voltages
- Magnets

Source of
 α particles

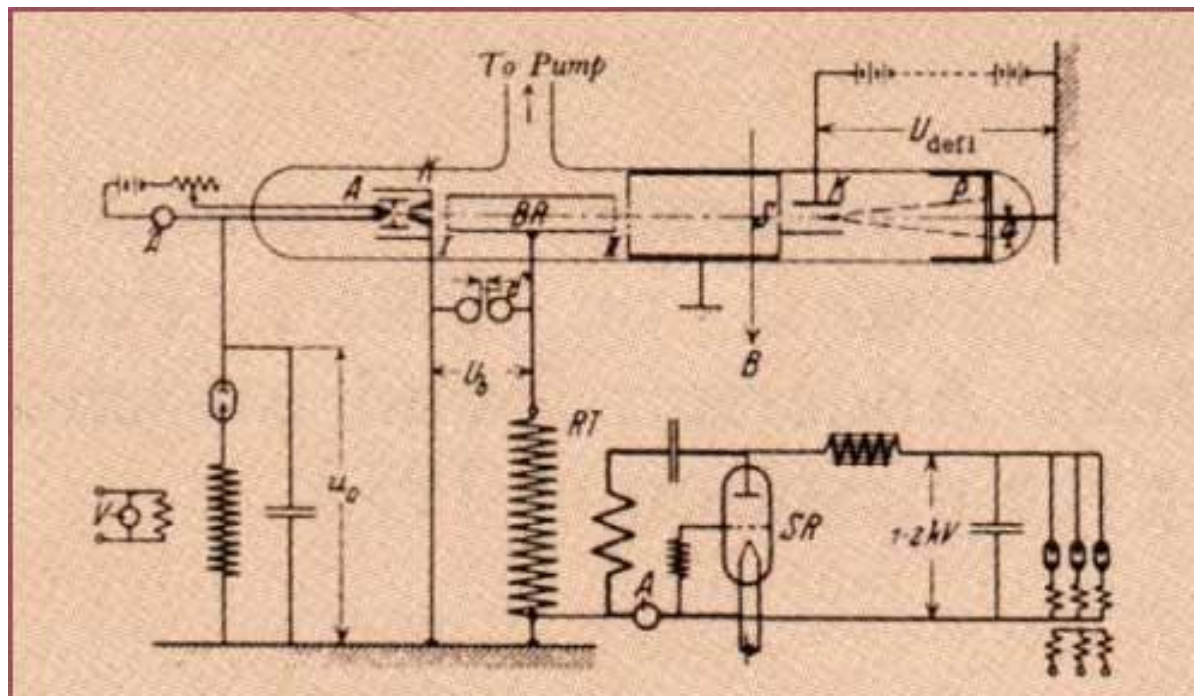

Gold foil

Screen

$$\frac{mv^2}{r} = qvB$$

$$f = \frac{v}{2r\pi} = \frac{qB}{2m\pi}$$

$$T = \frac{mv^2}{2} = \frac{q^2 B^2 R^2}{2m}$$

Fig. 1-1. Energies achieved by accelerators from 1930 to 1960. The linear envelope of the individual curves shows an average tenfold increase in energy every six years.

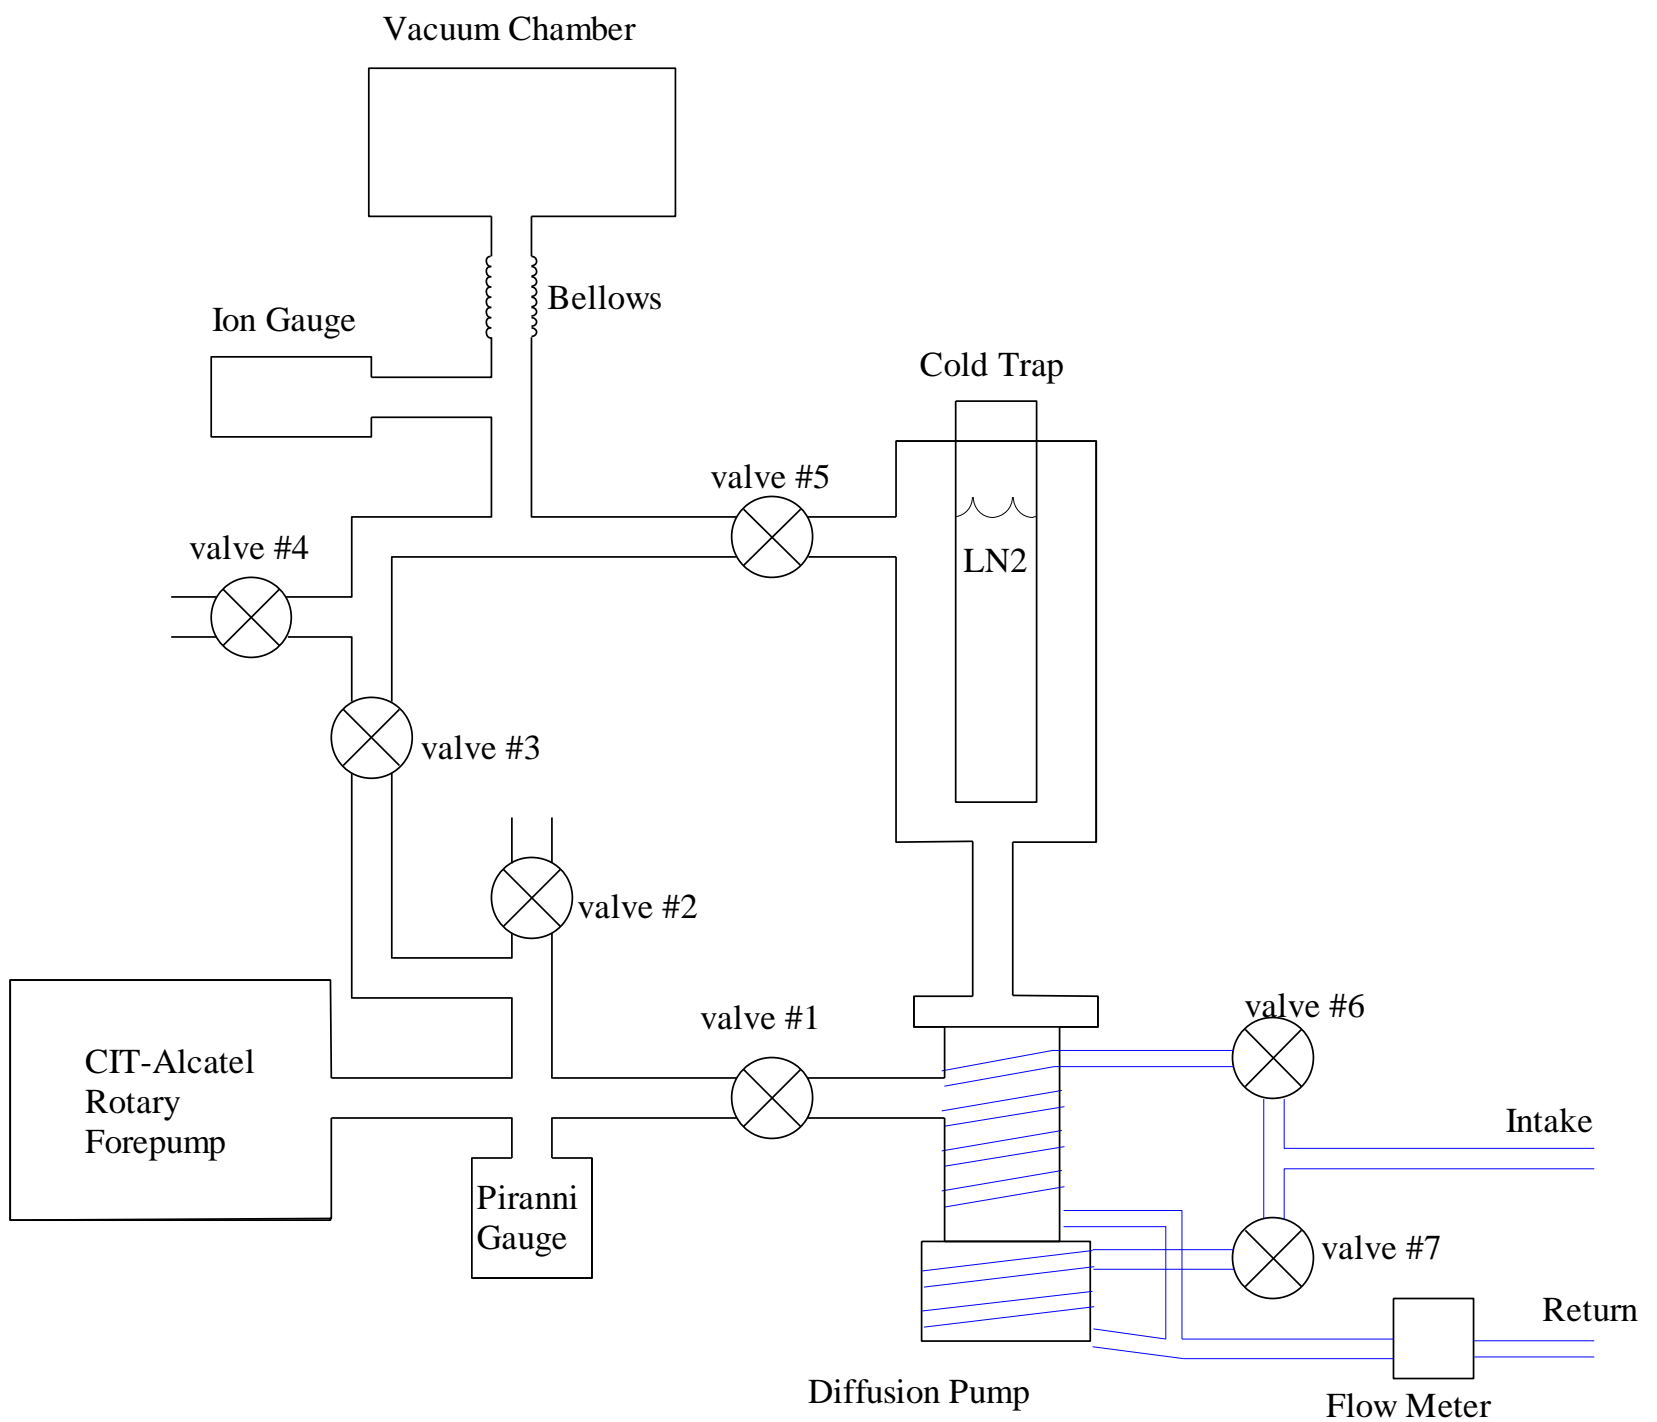

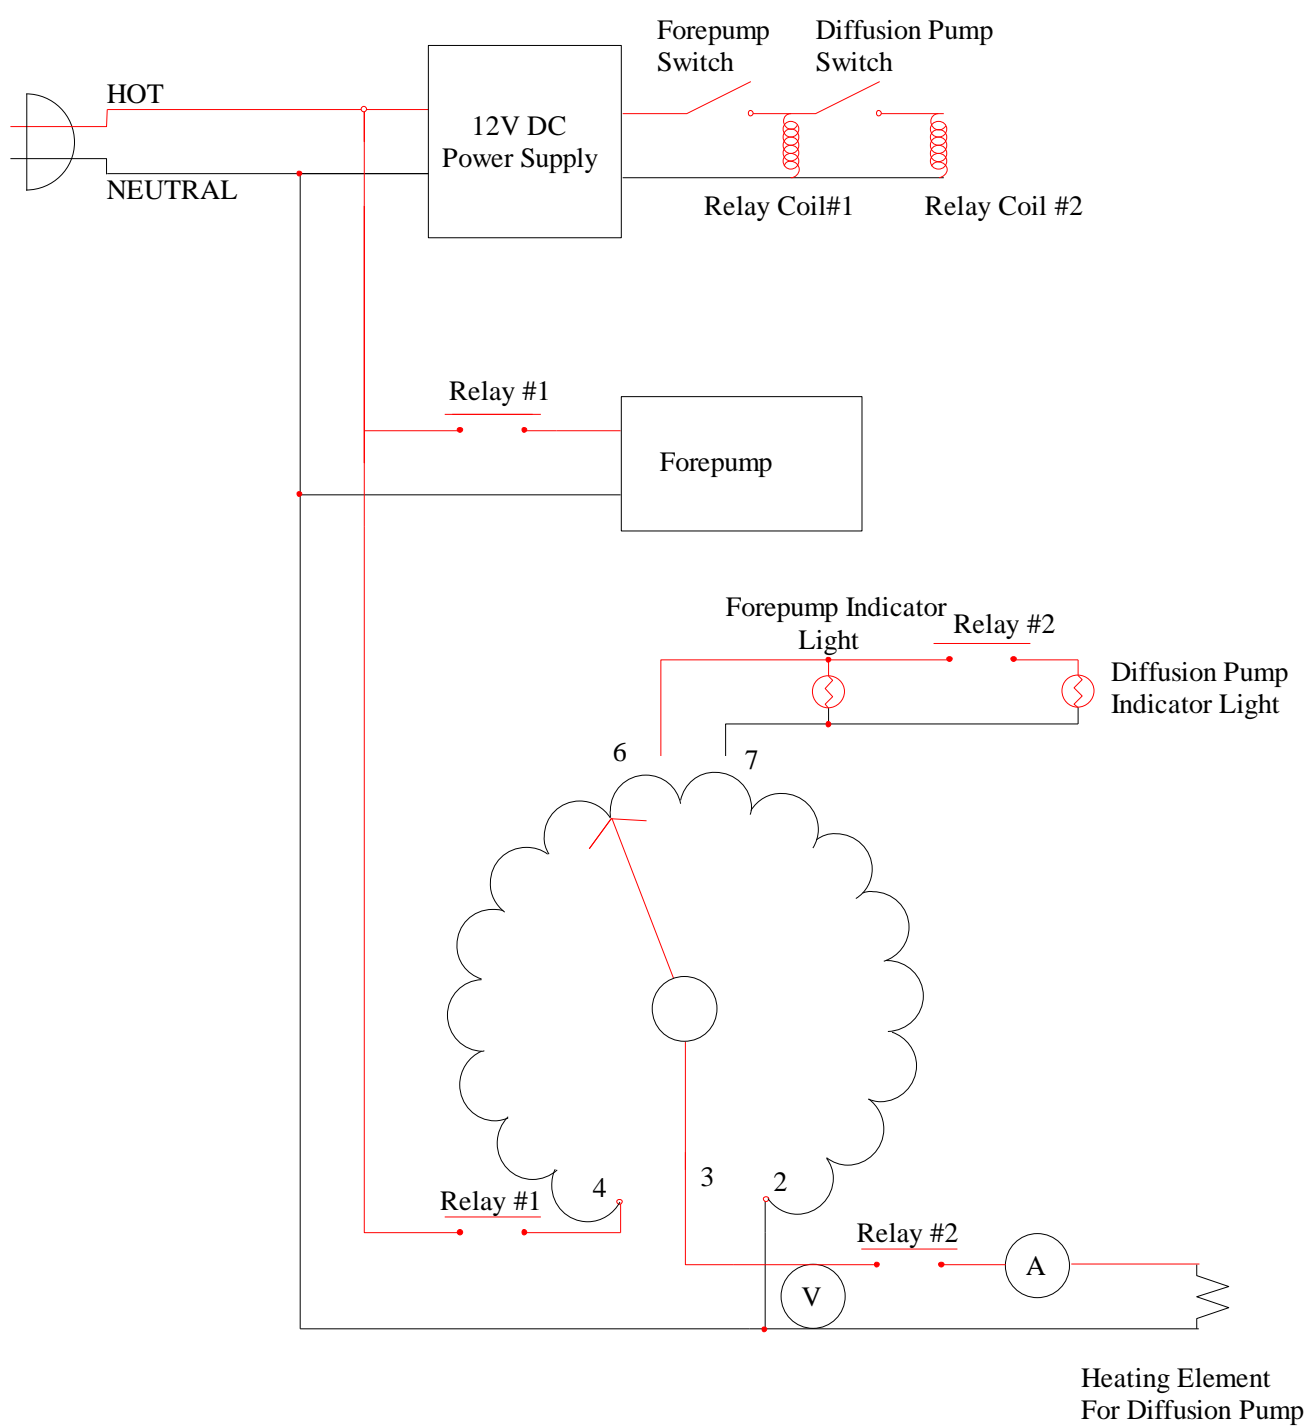

Magnetic Field vs. Radius

- Where are we now?
- Where are we going?
- What are are long term Goals?
